

Homeostasis Poster

Directions:

1. Select one of the following homeostasis processes:
 - Blood pH homeostasis
 - Blood pressure homeostasis
 - Sleep homeostasis
 - Copper homeostasis
 - Zinc homeostasis
 - Iron homeostasis
 - Energy homeostasis
 - Sodium homeostasis
2. Research your chosen homeostasis process and create a poster to present information about the process. You will need to include:
 - What body systems are involved in the homeostasis process
 - What levels are normal
 - What occurs when levels are abnormal
 - The chemical and biological processes responsible for ensuring homeostasis is maintained
3. Your poster should include at least 300 words describing the process and at least three images.
4. Be prepared to share the poster with the class.
